NAME: - TUSHAR SHARMA

REGISTRATION NO. – 25BCE11241

BATCH- 2025-26

YEAR – 1st

COURSE CODE –

DATE – 25 MARCH 2026

📘 Project Overview and Scenario

This Digital Literacy project is designed to develop awareness and practical understanding of responsible and safe use of digital technologies among students. The project is based on the scenario of a student acting as a “Digital Ambassador,” whose role is to guide peers in navigating the digital world effectively and securely.

Through a series of structured tasks, the project covers important aspects of digital literacy, including online safety, phishing and UPI fraud awareness, responsible social media usage, digital communication etiquette, and the use of modern tools such as Google Forms, Canva, GitHub, and HackerRank. Each task focuses on building both theoretical knowledge and practical skills, such as creating quizzes, designing infographics, writing professional emails, and analysing real-world cybercrime cases.

The overall objective of this project is to equip students with essential digital skills, promote safe online behavior, and prepare them for academic, professional, and everyday digital interactions in an increasingly technology-driven world.

While researching UPI and online payment fraud along with the “Stay Safe Online” checklist, what surprised me the most was how simple mistakes can lead to serious financial loss. I was particularly shocked to learn that many people still believe scanning a QR code is required to receive money, whereas it actually results in sending money. The ease with which fraudsters manipulate users through calls, fake messages, and urgency tactics was also unexpected.

As a result of this learning, one habit I will personally change is being more cautious while making online transactions. I will always double-check payment requests, avoid scanning unknown QR codes, and never share OTPs or UPI PINs with anyone. Additionally, I will verify the authenticity of any financial communication before taking action to ensure my digital safety.

What surprised you, one habit you will change

While researching UPI and online payment fraud along with online safety practices, what surprised me the most was how easily people can lose money due to small misunderstandings. I was particularly shocked to learn that scanning a QR code or approving a payment request actually sends money instead of receiving it. Many users fall victim to such tricks due to lack of awareness.

As a result, one habit I will personally change is being more cautious while handling online payments. I will always verify transaction details before approving any request, avoid scanning unknown QR codes, and never share my OTP or UPI PIN with anyone. This habit will help me ensure safe and secure digital transactions in the future.
